

What is Report Kit?

Short: Visual Report Design Application.

In Details: [Report Kit](#) is an independent software for creating, delivering and automating reports from source files like CSV, SQLite and DB. Create stylish database and table driven reports without writing any SQL or other code. Drag and drop text objects to pull data from sources and connect them to CSV or SQLite tables. Merge different database tables in a single report document.

Report Kit Interface

- Visual report designer. Full-featured modern report editor with a huge set of tools for visually creating, tuning, and editing report templates
- Easy and clear interface
- Objects: text, rectangle, oval, triangle, line and image objects to make report look stylish

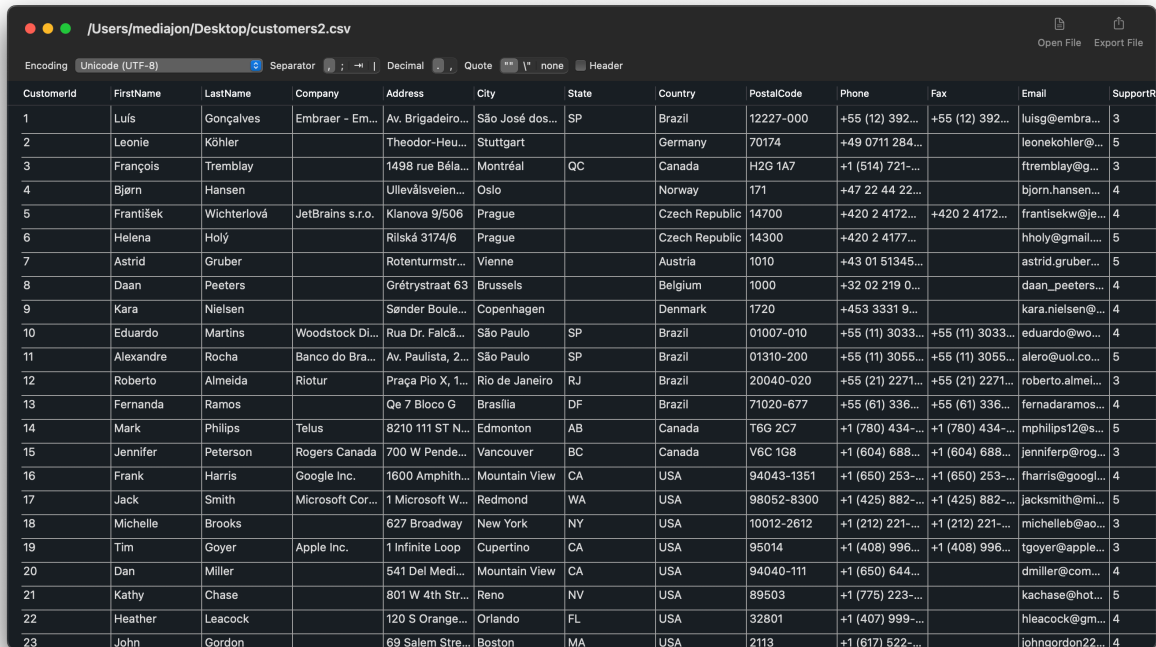

Connect to the following type of files:

- CSV
- SQLite
- DB

Reports can be exported as a PDF file!

Convert SQLite and Db files into CSV file format!

1. File Menu -> Preview File...
2. Open Data File
3. Click Export button on the toolbar

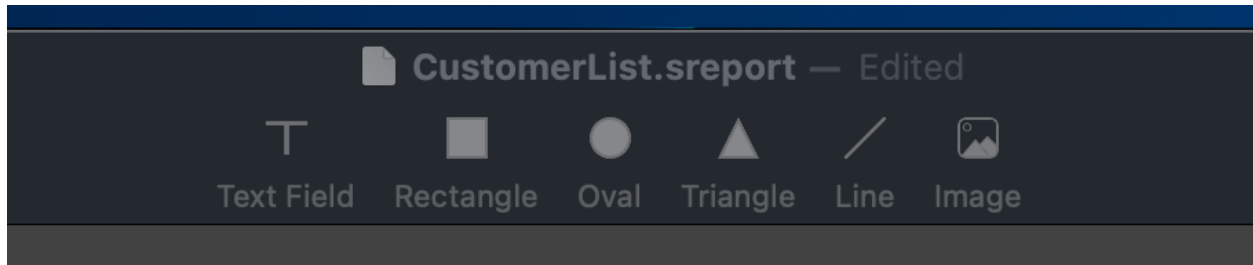

The screenshot shows a CSV file viewer application with the file path `/Users/mediajon/Desktop/customers2.csv`. The application has a toolbar with options for Encoding (Unicode (UTF-8)), Separator (comma), Decimal (period), Quote (double quote), and Header (checked). The data is displayed in a table with 13 columns: CustomerId, FirstName, LastName, Company, Address, City, State, Country, PostalCode, Phone, Fax, Email, and SupportR. The table contains 23 rows of customer data.

Objects

Objects are located on the Toolbar.

1. **Text Object** - it can be connected to 4 types of sources

- Info Label - Just info, edited manually
- Page Number - sets page number automatically
- Date - sets current date automatically
- Data File - gets data from selected table column, from connected data file, can be connected to CSV, SQLite ad DB files.

2. **Rectangle Object** - page decoration object

3. **Oval Object** - page decoration object

4. **Triangle Object** - page decoration object

5. **Line Object** - page decoration object

6. **Image Object** - page decoration object

Connect Text Object to CSV File

This section is located in Inspector. When you select a Text Object, this part is activated.

Source	Data File	→	Select Data File from Source List
Choose File	CVSFile.csv	→	Choose CSV file from your disc
Encoding	Unicode (UTF-8)	→	Change encoding type if it's different
Column	1	→	Set column
<input type="checkbox"/> Include First Row		→	Activate this button if you
How many lines	5	→	Set how many lines will be in this Text Object

Connect Text Object to SQLite or DB File

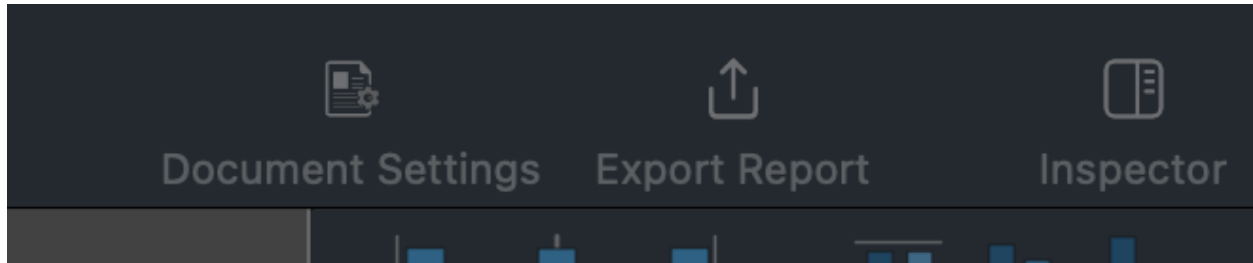

This section is located in Inspector. When you select a Text Object, this part is activated.

The diagram illustrates the configuration options for connecting a Text Object to a SQLite or DB File. The left panel shows the Inspector settings, and the right panel shows corresponding instructions for each setting.

Inspector Setting	Instruction
Source: Data File	Select Data File from Source List
Choose File: chinook.db	Choose Data file from your disc
Select Table: customers	Select Table
Database Password: [Empty]	Set Password if file locked
Column: 11	Set column
<input type="checkbox"/> Include First Row	Activate this button if you
How many lines: 15	Set how many lines will be in this Text Object

Export Report

Export button is located on the Toolbar, or you can use Export Menu from File Menu.

Note: Before starting to export, deselect all text objects, any text object should not be selected while exporting.
